mediaSHOW   digital video player

As part of the NETmc mediaNET range of products NETmc introduces the mediaSHOW multi-channel programmable digital video player software.

Created with the content producer in mind the mediaSHOW adopts a user-friendly approach to managing multi-channel MPEG playback and scheduling for use at display venues.

Combining mediaNET's approach to digital asset management mediaSHOW can import lists from external databases, doing away with the need to type long text lists to produce your playback material. Data can be imported into category, class or event folders, automatically adding the paths to the media clips in the database.

Access to your media clips is achieved via Event Selection or by the Media Search utility, where you can search by date, category, text, country etc. This facility allows you to quickly build up a playback list and to schedule a time, day and date for it to be played. Facilities to help you to add banners, logos or merely black spacer sequences at the start, in between or at the end of your selections. All of these utilities are run from the user-friendly interface to enable virtually anyone to manipulate the software regardless of their PC experience. Once these events have been saved then mediaSHOW will take over unattended.

In addition, mediaVT & mediaSTORE can be can be added enabling users to build their digital asset management capabilites as and when required.

Features

mediaSHOW database - Search for your media content by Event, Class, Category, Country, Text etc in order to make your selections.

Random play MPEG files - Select a file from search screens and preview on SVGA or CRT monitor.

VCR style schedule management - Schedule event play-out on a VCR style timer, up to 20 program timers for each total event.
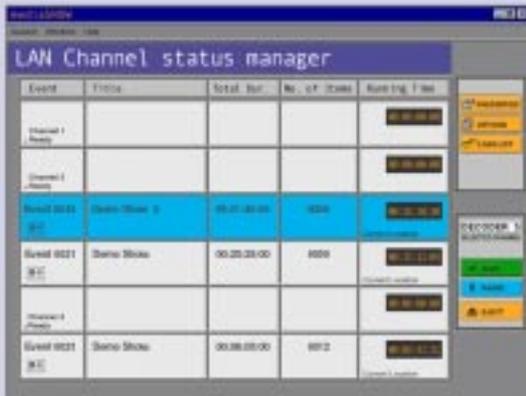

Multi-channel support & monitoring - Monitor up to 6 decoders on either local PC or remotely over a network.

mediaCOPY - Copy files to local disk from on-line, near on-line or off-line storage systems allowing greater number of hours to be played without intervention.

Media clip management - Manage where clips are stored including banners, logos, black files and your media items.

technology through innovation

mediaSHOW digital video player

Media Search & Playback Screens for easy event creation.

MPEG Playback at the touch of a button.

LAN Monitoring of all Decoders available.

Load lists Remotely and adjust Playback options.

Easy management of media with user-friendly interfaces.

Computer Platform Recommended

Pentium 100 or higher.
Microsoft Windows 95,98
orWindows NT Workstation 4/SP 3 or higher.
Microsoft Internet Explorer 4 or higher.
64MB of memory or higher.
16 MB graphics card.
CDROM or DVDROM drive.
5GB of available hard-disk fo media files.
Optibase VideoPlex YUV, VideoPlex Xpress
(only 1channel enabled) MPEG decoder
card.

Features

Import data from external databases.
Search for media clips by Evend or Advanced
Search criteria.
Automated copying of media files to local hard
disk from
On-line, Near On-line or Off-line sub-system
capable.
Instant MPEG playback on PC or CRT monitor.
Schedule saved events with time, date and repeat
loops on VCR style timer.
Easy insertion of logos, banners, black files or
user defined items at the start, end or in between
media clips.
Monitor & manage up to 6 channels remotely,
including remote loading of data.
